Toxicology of the Immune System: A Human Approach Robert Burrell, Leonard J. Sauers, Dennis K. Flaherty

Robert Burrell Dennis K. Flaherty Leonard J. Sauers Toxicology of the Immune System A Human Approach Due to increased awareness of the AIDS crisis as well as concern about environmental chemicals, immunotoxicology has quickly become one of the most important and controversial topics in occupational medicine and toxicology. This insightful reference/text clarifies the subject by exploring the basic environmental, occupational, and therapeutic agents that can suppress or strengthen the immune system. The authors provide a necessary bridge between immunology and toxicology to explain the various products and processes that may change immune parameters, affect host resistance to infections and tumors, and alter a system's future reaction to exposure. They assess the damage done not only to the immune system, but also damage by the immune system as a result of altered functioning. Throughout the book, emphasis is placed on the relevance to existing clinical health and possible future adverse effects. Even the more common immunotoxic conditions, such as food and drug intolerance, cigarette smoking, and occupational asthma, are put into perspective, with straightforward information on possible genetic, environmental, and pharmacological risk factors. Detailed sections are included on:

- * Organ systems and target cells most often affected
- * Types of damage and injury resulting from immunotoxic reactions
- * Clinical populations in which immune system damage occurs
- * Methods for investigating the etiology of agents and risk assessment
- * Relevance of laboratory data to human risk
- * Strategies for achieving standard practices to prevent the disparity in results that characterizes many immune system studies
- * Regulatory affairs related to immunotoxicology

Laboratory and experimental findings are probed to determine how and to what degree different immunotoxicants have induced clinical disease. Citations of animal research are restricted to those studies that point the way for future human studies, or have direct relevance to human situations. To further the reader's understanding of xenobiotics, the authors treat the subject of purposeful immunomodulation, achieved by administering immunosuppressive or immunopotentiating drugs. Despite increasing public awareness, there remains an inaccurate perception of what chemicals can and cannot do. This important reference sets the record straight, making it an essential source for toxicologists, immunologists, industrial hygienists, microbiologists, allergists, as well as all professionals in the agricultural and cosmetic industries, and those involved in chemical and biological regulation.

From reader reviews:

Dominick Carter:

Nowadays reading books be than want or need but also work as a life style. This reading behavior give you lot of advantages. The huge benefits you got of course the knowledge your information inside the book which improve your knowledge and information. The data you get based on what kind of publication you read, if you want attract knowledge just go with training books but if you want feel happy read one with theme for entertaining such as comic or novel. Often the Toxicology of the Immune System: A Human Approach is kind of e-book which is giving the reader erratic experience.

Anthony Sierra:

Toxicology of the Immune System: A Human Approach can be one of your beginner books that are good idea. We recommend that straight away because this e-book has good vocabulary which could increase your knowledge in language, easy to understand, bit entertaining but nevertheless delivering the information. The author giving his/her effort to place every word into joy arrangement in writing Toxicology of the Immune System: A Human Approach however doesn't forget the main point, giving the reader the hottest and also based confirm resource details that maybe you can be among it. This great information can certainly drawn you into new stage of crucial thinking.

Debbie Jones:

Reading a book to become new life style in this year; every people loves to study a book. When you examine a book you can get a large amount of benefit. When you read books, you can improve your knowledge, simply because book has a lot of information on it. The information that you will get depend on what types of book that you have read. If you want to get information about your review, you can read education books, but if you act like you want to entertain yourself you are able to a fiction books, this kind of us novel, comics, and also soon. The Toxicology of the Immune System: A Human Approach offer you a new experience in studying a book.

Joseph Southard:

A lot of publication has printed but it is unique. You can get it by net on social media. You can choose the most effective book for you, science, comedian, novel, or whatever by searching from it. It is identified as of book Toxicology of the Immune System: A Human Approach. You'll be able to your knowledge by it. Without departing the printed book, it could add your knowledge and make you actually happier to read. It is most critical that, you must aware about book. It can bring you from one spot to other place.
