Novices and experts alike will receive insightful, practical advice on using, acquiring and exploiting technology that is so vital in both our personal lives and today's business world. Our manual begins with an overview of information technology, including a discussion of how e-mail, the Internet, Websites, typical office software applications and networks work (and the practical concerns related to using these technologies, such as privacy and security of information transmitted via these technologies). We will also discuss how use of these technologies creates both new practical and legal problems, on a personal level and in the workplace. We will then present the basic law that governs information technology, including copyrights, patents, trademarks, domain names and trade secrets. We will then cover drafting and negotiating of various types of technology contracts. In this manual, readers will explore how technology creates new risks and opportunities for fraud, how to distinguish between essential and non-essential provisions of agreements, how to create consensus between providers and users of technology, and how to avoid legal pitfalls associated with common usage of information technology. Later we will cover more advanced topics, such as open source software licensing and online business transactions.
